- Problem: Assess the quality of a FEM solution quantitatively for all Lagrange elements with polynomial degrees $1 \leq p \leq 5$ available in COMSOL.
- Approach: Use guidance from the a priori error estimate

$$
\left\|u-u_{h}\right\|_{L^{2}(\Omega)} \leq C h^{q}, \quad \text { as } h \rightarrow 0
$$

with a constant $C$ independent of $h$ and the convergence order $q>0$. Here, $h$ is the maximum side length of the elements in the triangulation.

- Goal: Confirm that solutions on a sequence of meshes, that are progressively uniformly refined, behaves as predicted by the error estimate.
- Concrete goal: Show how to do this in COMSOL's GUI!

## Computational Convergence Study

- Consider the FEM solution $u_{h}$ on a sequence of meshes with uniform refinement levels $r=0,1,2, \ldots$, and let $E_{r}:=\left\|u-u_{h}\right\|_{L^{2}(\Omega)}$ denote the norm of the error.
- Then assuming that $E_{r}=C h^{q}$, the error for the next coarser mesh with mesh spacing $2 h$ is $E_{r-1}=C(2 h)^{q}=2^{q} C h^{q}$. Their ratio is then $R_{r}=E_{r-1} / E_{r}=2^{q}$ and $Q_{r}=\log _{2}\left(R_{r}\right)$ provides us with a computable estimate for $q$ as $h \rightarrow 0$. Example:

| $r$ | $E_{r}$ | $R_{r}$ | $Q_{r}$ |
| :---: | :---: | ---: | ---: |
| 0 | $1.077 \mathrm{e}-01$ | N/A | N/A |
| 1 | $2.652 \mathrm{e}-02$ | 4.06 | 2.02 |
| 2 | $6.709 \mathrm{e}-03$ | 3.95 | 1.98 |
| 3 | $1.684 \mathrm{e}-03$ | 3.98 | 1.99 |
| 4 | $4.214 \mathrm{e}-04$ | 3.99 | 2.00 |

- This indicates that the convergence order is $q=2$.

## FEM Theory for Lagrange Elements

- For linear Lagrange elements (polynomial degree $p=1$ ), optimal convergence order is $q=p+1=2$ in

$$
\left\|u-u_{h}\right\|_{L^{2}(\Omega)} \leq C h^{q}=C h^{2}
$$

- For Lagrange FEM with polynomial degree $p=1, \ldots, 5$, as available in COMSOL, we expect $q=p+1$ in

$$
\left\|u-u_{h}\right\|_{L^{2}(\Omega)} \leq C h^{q}=C h^{p+1}
$$

provided that

- the solution $u$ is smooth enough: $u \in H^{k}(\Omega)$ with $k \geq p+1$,
- the domain $\Omega$ is open, bounded, convex, and simply connected,
- and the domain boundary $\partial \Omega$ piecewise polygonal, i.e., the domain $\Omega$ can be triangulated without error.
- For Lagrange FEM with polynomial degree $p=1, \ldots, 5$, if the solution is $u \in H^{k}(\Omega)$, then

$$
\left\|u-u_{h}\right\|_{L^{2}(\Omega)} \leq C h^{q}, \quad q=\min \{k, p+1\}
$$

## Elliptic Test Problem: Problem Statement

Classical elliptic test problem on a polygonal domain with Dirichlet boundary conditions on $\Omega \subset \mathbb{R}^{2}$

$$
\begin{aligned}
-\Delta u=f & \text { in } \Omega, \\
u=r & \text { on } \partial \Omega .
\end{aligned}
$$

- Use unit square as domain: $\Omega=(0,1) \times(0,1) \subset \mathbb{R}^{2}$.
- Right-hand side function:

$$
f(x, y)=\left(-2 \pi^{2}\right)\left(\cos (2 \pi x) \sin ^{2}(\pi y)+\sin ^{2}(\pi x) \cos (2 \pi y)\right)
$$

- Homogeneous Dirichlet boundary conditions:

$$
r(x, y)=0
$$

## Elliptic Test Problem: PDE Solution

- $u(x, y)=\sin ^{2}(\pi x) \sin ^{2}(\pi y)$ on $\Omega=(0,1) \times(0,1) \subset \mathbb{R}^{2}$
- $u$ infinitely often differentiable $\Longrightarrow u \in H^{k}(\Omega)$ with $k=\infty$
- Therefore convergence order $q=\min \{k, p+1\}=p+1$.

## Elliptic Test Problem: Mesh and FEM Solution with Order $p=1$

Extremely Coarse Mesh

Surface: Dependent variable u Surface Height Dependent variable u

Linear Lagrange Elements $(p=1)$

- This mesh has $N_{e}=26$ elements and $N_{v}=20$ vertices.
- DOF is equal to $N_{v}$ for linear Lagrange elements.

## Elliptic Test Problem: Convergence Study with Linear Lagrange

Lagrange elements with $p=1$

| $r$ | $N_{e}$ | $N_{v}$ | DOF | $E_{r}^{2}$ | $E_{r}$ | $R_{r}$ | $Q_{r}$ |
| ---: | ---: | ---: | ---: | :---: | :---: | ---: | ---: |
| 0 | 26 | 20 | 20 | $1.160 \mathrm{e}-02$ | $1.077 \mathrm{e}-01$ | N/A | N/A |
| 1 | 104 | 65 | 65 | $7.031 \mathrm{e}-04$ | $2.652 \mathrm{e}-02$ | 4.06 | 2.02 |
| 2 | 416 | 233 | 233 | $4.501 \mathrm{e}-05$ | $6.709 \mathrm{e}-03$ | 3.95 | 1.98 |
| 3 | 1664 | 881 | 881 | $2.835 \mathrm{e}-06$ | $1.684 \mathrm{e}-03$ | 3.98 | 1.99 |
| 4 | 6656 | 3425 | 3425 | $1.776 \mathrm{e}-07$ | $4.214 \mathrm{e}-04$ | 3.99 | 2.00 |

- Same results as presented before. Additional information includes $E_{r}^{2}$ which is the raw data that appears in the GUI along with statistical information about the mesh.
- Note: Number of vertices $N_{v}$ was obtained using LiveLink with MATLAB. See tech. rep. HPCF-2010-8.

## Elliptic Test Problem: FEM Solutions with $p=1$ and $p=2$

Linear Lagrange ( $p=1$ )

Quadratic Lagrange ( $p=2$ )

Elliptic Test Problem: Lagrange Elements of Orders $p=2$ and $p=3$
Lagrange elements with $p=2$

| $r$ | $N_{e}$ | $N_{v}$ | DOF | $E_{r}^{2}$ | $E_{r}$ | $R_{r}$ | $Q_{r}$ |
| ---: | ---: | ---: | ---: | :---: | :---: | ---: | ---: |
| 0 | 26 | 20 | 65 | $4.351 \mathrm{e}-05$ | $6.596 \mathrm{e}-03$ | N/A | N/A |
| 1 | 104 | 65 | 233 | $1.259 \mathrm{e}-06$ | $1.122 \mathrm{e}-03$ | 5.88 | 2.56 |
| 2 | 416 | 233 | 881 | $2.076 \mathrm{e}-08$ | $1.441 \mathrm{e}-04$ | 7.79 | 2.96 |
| 3 | 1664 | 881 | 3425 | $3.294 \mathrm{e}-10$ | $1.815 \mathrm{e}-05$ | 7.94 | 2.99 |
| 4 | 6656 | 3425 | 13505 | $5.180 \mathrm{e}-12$ | $2.276 \mathrm{e}-06$ | 7.97 | 3.00 |

Lagrange elements with $p=3$

| $r$ | $N_{e}$ | $N_{v}$ | DOF | $E_{r}^{2}$ | $E_{r}$ | $R_{r}$ | $Q_{r}$ |
| ---: | ---: | ---: | ---: | :---: | :---: | ---: | ---: |
| 0 | 26 | 20 | 136 | $6.991 \mathrm{e}-06$ | $2.644 \mathrm{e}-03$ | N/A | N/A |
| 1 | 104 | 65 | 505 | $2.031 \mathrm{e}-08$ | $1.425 \mathrm{e}-04$ | 18.56 | 4.21 |
| 2 | 416 | 233 | 1945 | $7.460 \mathrm{e}-11$ | $8.637 \mathrm{e}-06$ | 16.50 | 4.04 |
| 3 | 1664 | 881 | 7633 | $2.834 \mathrm{e}-13$ | $5.327 \mathrm{e}-07$ | 16.22 | 4.02 |
| 4 | 6656 | 3425 | 30241 | $1.095 \mathrm{e}-15$ | $3.309 \mathrm{e}-08$ | 16.10 | 4.01 |

## Elliptic Test Problem: Lagrange Elements of Orders $p=4$ and $p=5$

Lagrange elements with $p=4$

| $r$ | $N_{e}$ | $N_{v}$ | DOF | $E_{r}^{2}$ | $E_{r}$ | $R_{r}$ | $Q_{r}$ |
| ---: | ---: | ---: | ---: | :---: | :---: | ---: | ---: |
| 0 | 26 | 20 | 233 | $6.634 \mathrm{e}-09$ | $8.145 \mathrm{e}-05$ | N/A | N/A |
| 1 | 104 | 65 | 881 | $1.467 \mathrm{e}-11$ | $3.830 \mathrm{e}-06$ | 21.27 | 4.41 |
| 2 | 416 | 233 | 3425 | $1.578 \mathrm{e}-14$ | $1.256 \mathrm{e}-07$ | 30.49 | 4.93 |
| 3 | 1664 | 881 | 13505 | $1.605 \mathrm{e}-17$ | $4.006 \mathrm{e}-09$ | 31.36 | 4.97 |
| 4 | 6656 | 3425 | 53633 | $1.595 \mathrm{e}-20$ | $1.263 \mathrm{e}-10$ | 31.71 | 4.99 |

Lagrange elements with $p=5$

| $r$ | $N_{e}$ | $N_{v}$ | DOF | $E_{r}^{2}$ | $E_{r}$ | $R_{r}$ | $Q_{r}$ |
| ---: | ---: | ---: | ---: | :---: | :---: | ---: | ---: |
| 0 | 26 | 20 | 356 | $7.656 \mathrm{e}-10$ | $2.767 \mathrm{e}-05$ | N/A | N/A |
| 1 | 104 | 65 | 1361 | $1.421 \mathrm{e}-13$ | $3.770 \mathrm{e}-07$ | 73.39 | 6.20 |
| 2 | 416 | 233 | 5321 | $3.421 \mathrm{e}-17$ | $5.849 \mathrm{e}-09$ | 64.45 | 6.01 |
| 3 | 1664 | 881 | 21041 | $8.306 \mathrm{e}-21$ | $9.114 \mathrm{e}-11$ | 64.17 | 6.00 |
| 4 | 6656 | 3425 | 83681 | $1.819 \mathrm{e}-24$ | $1.349 \mathrm{e}-12$ | 67.58 | 6.08 |

## Conclusions and Live Demonstration

Conclusions:

- COMSOL: behaves as predicted by theory for Lagrange elements on triangular meshes in 2-D.
- Education: COMSOL can be used to demonstrate FEM theory
- Applications: tests of this type can guide choice of finite elements
- Limitation of GUI: convergence study entirely in the GUI of COMSOL; however, the refinement level $r$ and polynomial degree $p$ cannot be programmed as parameters in a parameter sweep $\Rightarrow$ consider using COMSOL's LiveLink for MATLAB!
- Support: tech. rep. HPCF-2010-8 at www.umbc.edu/hpcf $>$ Publications, includes the mph-file and m-files for LiveLink for MATLAB

Demonstration:

- Loads mph-file as starting point: (i) sets up domain, PDE, BC; (ii) chooses linear Lagrange ( $p=1$ ) with 'extremely coarse' mesh and no refinement ( $r=0$ ); (iii) after solution gives 3-D view of solution and square of FEM error by post-processing integration
- Shows how to obtain refined meshes for $r=1,2, \ldots$ and their solutions including square of error
